Contract costs

The incremental costs of obtaining a contract with a customer are recognized as an asset when the costs are expected to be recovered. The Company uses a practical expedient that permits the costs to be expensed to obtain a contract as incurred when the expected amortization period is one year or less. Costs of obtaining a contract that are not incremental are expensed as incurred unless those costs are explicitly chargeable to the customer. Bid, proposal, and selling and marketing costs, as well as legal costs incurred in connection with the pursuit of the contract, are not incremental, as the Company would have incurred those costs even if it did not obtain the contract.

If the costs incurred in fulfilling a contract with a customer are not within the scope of another IFRS standard (e.g. IAS 2 Inventories, IAS 16 Property, Plant and Equipment or IAS 38 Intangible Assets), the Company recognizes an asset for the costs incurred to fulfill a contract only if those costs meet all of the following criteria:

- The costs relate directly to a contract or to an anticipated contract that the Company can specifically identify (for example, costs relating to services to be provided under renewal of an existing contract or costs of designing an asset to be transferred under a specific contract that has not yet been approved);
- The costs generate or enhance resources of the entity that will be used in satisfying (or in continuing to satisfy) performance obligations in the future; and
- The costs are expected to be recovered.

An asset recognized for contract costs is amortized on a systematic basis that is consistent with the transfer to the customer of the goods or services to which the asset relates.

Contract assets

Contract assets as defined in IFRS 15 represent the Company's construction work-in-progress. Construction work-in-progress is the Company's right to consideration in exchange for goods and services that the Company has transferred to the customer. The Company's contract assets are measured as accumulated revenue recognized over time based on progress of the project net of installments invoiced to date. The invoiced installments represent the contractually agreed unconditional milestone payments during the construction period and these amounts are classified as trade receivables until the amount is paid. The Company recognizes any losses from onerous contracts under provisions in line with IAS 37. Further the impairment of contract assets is measured, presented and disclosed on the same basis as financial assets that are within the scope of IFRS 9. The Company applies the simplified approach in measuring expected credit losses for contract assets. In case of contract asset balances relating to the finance lease contracts, the Company applies the low credit risk simplification of IFRS 9 for the computation of the expected credit loss. The simplification is applied as the credit risk profile of these balances has been assessed as low.

In prior consolidated financial statements, the Company presented contract assets as Construction work-in-progress in the consolidated statement of financial position as well as the notes to the consolidated financial statements.

Contract liabilities

The Company recognizes a contract liability (see note '4.3.25 Trade and Other Payables') where installments are received in advance of satisfying the performance obligation towards the customer.

(e) Operating segment information

As per IFRS 8, an operating segment is a component of an entity that engages in business activities from which it may earn revenues and incur expenses, whose segmental operating results are regularly reviewed by the entity's chief operating decision maker, and for which distinct financial information is available.

The Management Board, as chief operating decision maker, monitors the operating results of its operating segments separately for the purpose of making decisions about resource allocation and performance assessment. Segment performance is evaluated based on revenue, gross margin, EBIT and EBITDA, and prepared in accordance with Directional reporting. The Company has two reportable segments:

- The Lease and Operate segment includes all earned day-rates on operating lease and operate contracts.
- The Turnkey segment includes revenues from Turnkey supply contracts and after-sales services, which consist mainly of large production systems, large mooring systems, deep water export systems, fluid transfer systems, tanker loading and discharge terminals, design services and supply of special components and proprietary designs and equipment. The new energy business also forms part of the Turnkey segment, this mainly relates to floating offshore wind solutions.

No operating segments have been aggregated to form the above reportable segments.

The Company's corporate overhead functions do not constitute an operating segment as defined by IFRS 8 'Operating segments' and are reported under the 'Other' section in note 4.3.2 Operating Segments and Directional Reporting.

Operating segment information is prepared and evaluated based on Directional reporting for which the main principles are explained in note 4.3.2 Operating Segments and Directional Reporting.

(f) Demobilization obligations

The demobilization obligations of the Company are either stated in the lease contract or derived from the international conventions and the specific legislation applied in the countries where the Company operates assets. Demobilization costs will be incurred by the Company at the end of the operating life of the Company's facilities.

For operating leases, the net present value of the future obligations is included in property, plant and equipment with a corresponding amount included in the provision for demobilization. As the remaining duration of each lease reduces, and the discounting effect on the provision unwinds, accrued interest is recognized as part of financial expenses and added to the provision. The subsequent updates of the measurement of the demobilization costs are recognized both impacting the provision and the asset.

In some cases, when the contract includes a demobilization bareboat fee that the Company invoices to the client during the demobilization phase, a receivable is recognized at the beginning of the lease phase for the discounted value of the fee. When the receivable is recognized, it is limited to the amount of the corresponding demobilization obligation. These receivables are subject to expected credit loss impairment which are analyzed together with the finance lease receivable using the same methodology.

For finance leases, demobilization obligations are analyzed as a component of the sale recognized under IFRS 15. It is determined whether the demobilization obligation should be defined as a separate performance obligation. In that case, because the demobilization operation is performed at a later stage, the related revenue is deferred until the demobilization operations occur. Subsequent updates of the measurement of the demobilization costs are recognized immediately through deferred revenue, for the present value of the change.

C. SIGNIFICANT ACCOUNTING POLICIES

The consolidated financial statements of the Company have been prepared on the historical cost basis except for the revaluation of certain financial instruments.

(a) Distinction between current and non-current assets and liabilities

The Company classifies its assets as current when it expects to realize the asset, or intends to sell or consume it, in its normal operating cycle. Inventory and contract balances are classified as current while the time when these assets are sold or consumed might be longer than twelve months. Financial assets are classified as current when they are realized within twelve months. Liabilities are classified as current when they are expected to be settled within less than twelve months and the Company does not have an unconditional right to defer settlement of the liability for at least 12 months after the reporting period. All other assets and liabilities are classified as non-current.

(b) Consolidation

The Company's consolidated financial statements include the financial statements of all controlled subsidiaries.

In determining under IFRS 10 whether the Company controls an investee, the Company assesses whether it has i) power over the investee, ii) exposure or rights to variable returns from its involvement, and iii) the ability to use power over investees to affect the amount of return. To determine whether the Company has power over the investee, multiple contractual elements are analyzed, among which i) voting rights of the Company at the General Meeting, ii) voting rights of the Company at Board level and iii) the power of the Company to appoint, reassign or remove other key management personnel.

For investees whereby such contractual elements are not conclusive because all decisions about the relevant activities are taken on a mutual consent basis, the main deciding feature resides then in the deadlock clause existing in shareholders' agreements. In case a deadlock situation arises at the Board of Directors of an entity, whereby the Board is unable to conclude on a decision, the deadlock clause of the shareholders' agreements generally stipulates whether a substantive right
