4 FINANCIAL INFORMATION 2022

is granted to the Company or to all the partners in the entity to buy its shares through a compensation mechanism that is fair enough for the Company or one of the partners to acquire these shares. In case such a substantive right resides with the Company, the entity will be defined under IFRS 10 as controlled by the Company. In case no such substantive right is held by any of the shareholders through the deadlock clause, the entity will be defined as a joint arrangement.

Subsidiaries:

Subsidiaries are all entities over which the group has control. The group controls an entity when the group is exposed to, or has rights to, variable returns from its involvement with the entity and has the ability to affect those returns through its power over the entity. Subsidiaries are consolidated using the full consolidation method.

All reciprocal transactions between two controlled subsidiaries, with no profit or loss impact at consolidation level, are fully eliminated for the preparation of the consolidated financial statements.

Interests in joint ventures:

The Company has applied IFRS 11 'Joint Arrangements' to all joint arrangements. Under IFRS 11 investments in joint arrangements are classified as either joint operations or joint ventures depending on the contractual rights and obligations of each investor. In determining under IFRS 11 the classification of a joint arrangement, the Company assesses that all joint arrangements are structured through private limited liability companies incorporated in various jurisdictions. As a result, assets and liabilities held in these separate vehicles are those of the separate vehicles and not those of the shareholders of these limited liability companies. Shareholders have no direct rights to the assets, nor primary obligations for liabilities of these vehicles. As a result the Company classifies its joint arrangements to be joint ventures. Joint ventures are accounted for using the equity method.

Investments in associates:

Associates are all entities over which the Company has significant influence. Significant influence is the power to participate in the financial and operating policy decisions of the investee, but it is not control over those policies. Investments in associates are accounted for using the equity method.

When losses of an equity-accounted entity are greater than the value of the Company's net investment in that entity, these losses are not recognized unless the Company has a constructive obligation to fund the entity. The share of the negative net equity of these is first accounted for against the loans held by the owner towards the equity-accounted company that forms part of the net investment. Any excess is accounted for under provisions.

Reciprocal transactions carried out between a subsidiary and an equity-accounted entity, are not eliminated for the preparation of the consolidated financial statements. Only transactions leading to an internal profit (e.g. for dividends or internal margin on asset sale) are eliminated applying the percentage owned in the equity-accounted entity.

The financial statements of the subsidiaries, associates and joint ventures are prepared for the same reporting period as the Company and the accounting policies are in line with those of the Company.

(c) Non-derivative financial assets

The Company's financial assets consist of finance lease receivables, loans to joint ventures and associates and trade and other receivables. The accounting policy on trade and other receivables is described separately.

Finance lease receivables are non-derivative financial assets with fixed or determined payments that are not quoted in an active market.

Loans to joint ventures and associates relate primarily to interest-bearing loans to joint ventures. These financial assets are initially measured at fair value plus transaction costs (if any) and subsequently measured at amortized cost.

The Company classifies its financial assets at amortized cost only if both of the following criteria are met:

- The asset is held within a business model whose objective is to collect the contractual cash flows; and
- The contractual terms give rise to cash flows that are solely payments of principal and interest.

Financial assets are derecognized when the contractual rights to the cash flows from the financial asset expire or have been transferred and the Company has transferred substantially all the risks and rewards of ownership.

(d) Borrowings (bank and other loans) and lease liabilities

Borrowings are recognized on settlement date, being the date on which cash is paid or received. They are initially recognized at fair value, net of transaction costs incurred (transaction price), subsequently measured at amortized cost and classified as current liabilities unless the Company has an unconditional right to defer settlement of the liability for at least twelve months after the statement of financial position date.

Borrowing costs that are directly attributable to the acquisition, construction or production of a qualifying asset are capitalized into the cost of the asset in the period in which they are incurred. Otherwise, borrowing costs are recognized as an expense in the period in which they are incurred.

Borrowings are derecognized when the Company either discharges the borrowing by paying the creditor or is legally released from primary responsibility for the borrowing either by process of law or by the creditor.

Lease liabilities, arising from lease contracts in which the Company is the lessee, are initially measured at the net present value of the following:

- Fixed lease payments (including in-substance fixed payments), less any lease incentives receivable;
- Variable lease payments that are based on an index or a rate;
- Amounts expected to be payable under residual value guarantees;
- The exercise price of a purchase option if the Company is reasonably certain to exercise that option; and
- Payments of penalties for terminating the lease, if the lease term reflects the Company exercising that option.

The lease payments are discounted using the interest rate implicit in the lease, if that rate can be determined, or the Company's incremental borrowing rate.

Each lease payment is allocated between the lease liability and finance cost. Finance cost is charged to the consolidated income statement over the lease period so as to produce a constant periodic rate of interest on the remaining balance of the liability for each period.

(e) Foreign currency transactions and derivative financial instruments

Foreign currency transactions are translated into the functional currency, the US dollar, at the exchange rate applicable on the transaction date. At the closing date, monetary assets and liabilities stated in foreign currencies are translated into the functional currency at the exchange rate prevailing on that date. Resulting exchange gains or losses are directly recorded in the income statement. At the closing date, non-monetary assets and liabilities stated in foreign currency remain translated into the functional currency using the exchange rate at the date of the transaction.

Translation of foreign currency income statements of foreign operations (except for foreign operations in hyperinflationary economies) into US dollars is converted at the average exchange rate prevailing during the year. Statements of financial position are translated at the exchange rate at the closing date. Differences arising in the translation of financial statements of foreign operations are recorded in other comprehensive income as foreign currency translation reserve. On consolidation, exchange differences arising from the translation of the net investment in foreign entities, and borrowings of such investments, are taken to Company equity. On disposal or partial disposal of a foreign operation, any corresponding cumulative exchange differences are transferred from equity to profit or loss.

Derivative financial instruments held by the Company are aimed at hedging risks associated with market risk fluctuations. The Company uses primarily forward currency contracts, interest rate swaps and commodity contracts to hedge foreign currency risk, interest rate risk and commodity price risk. Further information about the financial risk management objectives and policies is included in note 4.3.27 Financial Instruments – Fair Values and Risk Management.

A derivative instrument (cash flow hedge) qualifies for hedge accounting when all relevant criteria are met. A cash flow hedge aims at reducing risks incurred by variations in the value of future cash flows that may impact net income. In order for a derivative to be eligible for hedge accounting, the following criteria must be met:

- There is an economic relationship between the hedging instrument and the hedged item.
