### **(g) Property, plant and equipment**

*Property, plant and equipment* are stated at cost less accumulated depreciation and accumulated impairment losses.

Historical cost includes expenditure that is directly attributable to the acquisition of such items. The capital value of a facility to be leased and operated for a client is the sum of external costs (such as shipyards, subcontractors and suppliers), internal costs (design, engineering, construction supervision, etc.), third party financial costs including interest paid during construction and attributable overhead.

Subsequent costs are included in an assets' carrying amount or recognized as a separate asset, as appropriate, only when it is probable that future economic benefits associated with the item will flow to the Company and the cost of the item can be measured reliably. The costs of assets include the initial estimate of costs of demobilization of the asset net of reimbursement expected to be received by the client.

Costs related to major overhaul which meet the criteria for capitalization are included in the asset's carrying amount. All other repairs and maintenance are charged to the income statement during the financial period in which they are incurred.

When significant parts of an item of property, plant and equipment have different useful lives, those components are accounted for as separate line items of property, plant and equipment. The depreciation charge is calculated based on future anticipated economic benefits, e.g. based on the unit of production method or on a straight-line basis as follows:

- New build Fast4Ward® FPSO up to 30 years (included in vessels and floating equipment);
- Converted tankers FPSO 10-20 years (included in vessels and floating equipment);
- Floating equipment 3-15 years (included in vessels and floating equipment);
- Buildings 30-50 years;
- Other assets 2-20 years;
- Land is not depreciated.

Regarding useful lives for vessels in operation, they are usually aligned with the lease period. Useful lives and methods of depreciation are reviewed at least annually and adjusted if appropriate.

The assets' residual values are reviewed and adjusted, if appropriate, at each statement of financial position date. An asset's carrying amount is written down immediately to its recoverable amount if the asset's carrying amount is higher than its estimated recoverable amount.

Gains and losses arising on disposals or retirement of assets are determined by comparing any sales proceeds and the carrying amount of the asset. These are reflected in the income statement in the period that the asset is disposed of or retired.

*Right-of-use assets* related to the Company's lease contracts in which the Company is a lessee are included in Property, plant and equipment. Right-of-use assets and corresponding liabilities are recognized when the leased asset is available for use by the Company. Right-of-use assets are measured at cost comprising the following:

- The amount of the initial measurement of the lease liability;
- Any lease payments made at or before the commencement date;
- Any initial direct costs; and
- Restoration costs.

The right-of-use asset is depreciated over the shorter of the asset's useful life and the lease term on a straight-line basis.

Payments associated with short-term leases and leases of low-value assets are recognized on a straight-line basis as an expense in profit or loss. Short-term leases are leases with a lease term of 12 months or less.

### **(h) Intangible assets**

*Goodwill* represents the excess of the cost of an acquisition over the fair value of the Company's share of the net identifiable assets of the acquired subsidiary at the date of the acquisition, less accumulated impairment.

Goodwill is allocated to cash-generating units (CGUs) for the purpose of the annual impairment testing.

## 4 FINANCIAL INFORMATION 2022

*Patents* are recognized at historical cost and patents acquired in a business combination are recognized at fair value at the acquisition date when intangible assets criteria are met and amortized on a straight-line basis over their useful life, generally over 15 years. When applicable, impairment losses are recognized.

*Software* is recognized at historical cost and is amortized on a straight-line basis over its useful life. The useful life of software is generally between 3 and 5 year, dependent on the type of software.

*Research costs* are expensed when incurred. In compliance with IAS 38, development costs are capitalized if all of the following criteria are met:

- The projects are clearly defined.
- The Company is able to reliably measure expenditures incurred by each project during its development.
- The Company is able to demonstrate the technical feasibility of the project.
- The Company has the financial and technical resources available to achieve the project.
- The Company can demonstrate its intention to complete, to use or to commercialize products resulting from the project.
- The Company is able to demonstrate the existence of a market for the output of the intangible asset, or, if it is used internally, the usefulness of the intangible asset.

When capitalized, development costs are carried at cost less any accumulated amortization and impairment losses. Amortization begins when the project is complete and available for use. It is amortized over the period of expected future benefit, which is generally between 3 and 5 years.

### **(i) Assets (or disposal groups) held for sale**

The Company classifies assets or disposal groups as being held for sale when their carrying amount will be recovered principally through a sale transaction rather than through continuing use.

### **(j) Inventories**

Inventories are valued at the lower of cost and net realizable value. Cost is determined using the first-in first-out method. Net realizable value is the estimated selling price in the ordinary course of business, less the estimated cost of completion and selling expenses. Inventories comprise semi-finished, finished products and the Company's Fast4Ward® Multi Purpose Floater ('MPF') valued at cost including attributable overheads and spare parts stated at the lower of purchase price or market value. MPFs under construction are accounted for as inventories until they are allocated to awarded projects and then reclassified from inventories to contract assets.

### **(k) Trade and other receivables**

Trade receivables are amounts due from customers for goods sold or services performed in the ordinary course of business. They are generally due for settlement within a maximum of 90 days and are therefore all classified as current. Trade receivables are recognized initially at fair value. The Company holds the trade receivables with the objective to collect the contractual cash flows and therefore measures them subsequently at amortized cost using the effective interest method. The Company applies the simplified approach in measuring expected credit losses for trade receivables.

Other receivables are recognized initially at fair value and subsequently measured at amortized cost, using the effective interest rate method. Interest income, together with gains and losses when the receivables are derecognized or impaired, is recognized in the income statement.

### **(l) Impairment of finance lease receivables**

For finance lease receivables the Company assumes that the credit risk has not increased significantly since the initial recognition if the finance lease receivable is determined to have a low credit risk at the reporting date (i.e. the Company applies the low credit risk simplification). As a result, if the finance lease receivable is determined to have a low credit risk at the reporting date, the Company recognizes a 12-month expected credit loss.

### **(m) Cash and cash equivalents**

Cash and cash equivalents consist of cash in bank and in hand fulfilling the following criteria: a maturity of usually less than three months, highly liquid, a fixed exchange value and an extremely low risk of loss of value.
